

BROCO BREACHER TRAINING DOOR

BROCO

MILITARY, TACTICAL,
FIRE & RESCUE

- **Emulates real door dimensions**

- Door thickness is only 1 3/4" so tool set and tool wrap are realistic
- Frame depth is 6" with 4 1/4" door inset

- **Three lock positions use wooden stakes, with a wood dowel for explosive breaching.**

- **Reinforced rubber pad over ram strike surface for reduced impact shock.**

- **Patent pending system for 'flex' between door and frame when prying/gapping for proper tool and wedge technique.**

- **Compact base plate eliminates struts that support most breach doors. Base is easily removed for hard mounting the door in a structure.**

- **Patent pending center training insert area accepts wood or metal door props from 24" – 32" wide.**

- Shoot multiple hinges and door locks without needing to reset each time. (Front side to back; frangible ammunition only.)

- Saw cut commercial metal door sections.

- **Explosive breach iterations with standard strip charge (inward opening, lock side only).**

The **Broco Breacher Training Door** is the most versatile Law enforcement and military training door supporting ram, pry, ballistic, hydraulic, saw and explosive breaches.

Perfect as a stand-alone door, it can easily be mounted into a shoot house or container.

The new accessory Security Screen Door Emulator pries from left and right and can be used for vehicle peels and vehicle pulls (full breakaway).

Heroes Don't Wait!
