

Diamond Ripper™ High Performance Rescue Blades!

BROCO®

From Broco, the Forced Entry Torch Leader

Broco Diamond Ripper™ Rescue Blade!

Races through steel, concrete, poly-carbonate (Plexiglas). One incredible blade does it all.

Solid core construction so no broken edges on 12" & 14" blades

Double layer diamond brazed cutting edge

- Aggressive cutting on most materials
- Extremely long blade life
- Smooth performance reduces fatigue

Light weight

Diamond electroplated facing

Broco's Diamond Ripper™'s double layer diamond cutting edge is thin like a metal cutting blade to yield cut times in steel that are near to those of fragile, quick-wearing abrasive disks. The more aggressive texture allows it to shred other media too, including concrete and laminated glass that have been typically cut with heavy carbide tipped blades. The nickel alloy matrix securing the diamonds resists erosion far longer. The 12" and 14" Diamond Ripper blades are solid core; from cutting edge to cutting edge it is all one piece. These blades cannot break or chip like diamond blades with laser welded cutting edges.

With all these industry leading features Broco's Diamond Ripper™ rescue blade is still one of the most affordable on the market making it the best value for your money.

- Smooth cuts on metal, concrete and more
- Cut concrete and rebar in the same pass
- Long blade life and fast cutting speed

The Mini Ripper™ diamond rescue blade is available in 4.5", 7" & 9" diameters.

With the same type cutting edge as the Diamond Ripper™, the Mini Ripper™ can be used with electric cutoff tools to cut through chains, locks and door bolts.

Tested on plate armor, ceramics and high strength metal-fiber-enriched reinforced concrete, the Diamond Ripper™ succeeded beyond expectations.
