## Broco Underwater® Subsea ROV Cutting with Augmented Telerobotics

The new Broco Underwater® subsea cutting saw combines the power and experience of Broco cutting technology with BluHaptics software for sensor fusion, machine learning and haptic guidance control. The result is a new tool that enables ROV work in areas previously only done by divers, as well as areas where divers cannot venture.

Haptic technology makes the new Broco subsea cutting saw different than standard ROV cutting operations:

- **Situational Awareness for Better Control**
- **Force Feedback and Sensory Integration**
- **Increased Capabilities**
- **Safety, Productivity, and Ease of Use**
